Oscenia ERP — Prototype Demo Guide

Project Management + Team Chat · Event Invitations, RSVP & Check-in · CRM

This guide walks through every feature in the clickable prototype, step by step. It follows the client decisions in the BRD (v0.2, `docs/BRD-PM-Events-CRM-v0.2.pdf`).

> **This is a front-end prototype.** Everything works on screen, but there is no server behind these features yet. Messages are not really sent, the QR camera is simulated, and data is kept in your own browser. See Good to know at the end.

Updated 2 Oct 2026 with your second round of feedback: a Discord-style chat, who may join a chat, meeting minutes for calls, and a vendor pipeline. Start with section 00. Section 0 still lists round 1.

00. What's new (round 2)

Each row is one point from your second round of feedback (2 Oct). If you saw the earlier preview, the demo data resets to the new version automatically.

#	You asked	What changed	How to check
CH3	Chat UI/UX like Discord	Discord's layout and behaviour in Oscenia's navy and gold. Server rail with a white pill (tall = open, short = unread) and a red badge for mentions and DMs. Server-name ▾ **menu**. Foldable **Text / Voice channels** and **Direct messages**. Messages from one person within a few minutes are grouped. **Voice channels**: a *Meeting room* per project and a *Lounge* for the company. A **user panel** bottom-left with status, mic and headphones. The member list shows **Online / Offline**.	Team Chat → **Aurora Bank Annual Gala** → under *Voice channels* click **Meeting room**. Teammates join and are listed under it. Press **Back to chat**: the panel bottom-left says *Voice connected*. (§4.1, §4.5)
CH5	Restrict who may or may not join a chat	Every channel has **Who can join**: everyone on the project, selected divisions, or invite only. It also has a **block list**. Others see the channel greyed with a 🔒 and can **Request to join** with a note. The PM, or a leader whose division works on the project, approves or declines.	**Viewing as Rina M.** → Aurora Gala → **#production** is locked, and her request is waiting. **Viewing as Hendra T.** → 🔔 *"Rina M. wants to join #production"* → **Approve**. (§4.6)
CH4	AI summary and minutes (MOM) of calls; restrict who sees the minutes and files	Every call leaves a **meeting record**: transcript, notes and files from the call, and **Summary & MOM**. **Generate AI summary & MOM** writes the minutes. In this demo it is a simulated AI summary, clearly labelled; real AI (DeepSeek) is ready to switch on. **The host decides** who reads them: the people on the call (default), the whole channel, or named people. Files can be **view-only**. The PM reads minutes of channel calls, never of direct-message calls.	**Viewing as Yoga K.** → Aurora Gala → #general → the 24 Jul call says *"Minutes restricted"*. **Viewing as Dinda A.** → **Minutes**. (§4.7)

#	You asked	What changed	How to check
V2	A pipeline for vendors, to see their stages	Vendors → **Pipeline**: **Prospect** → **Onboarding** → **Approved** → **Active**, with *On hold* and *Blacklisted* below. An onboarding checklist (NPWP, bank account, PIC, signed MoU, reference check). Only finance or the CEO approves. Only Approved or Active vendors can get a new PO.	Vendors → **Pipeline**: *BrightRig* is in Onboarding at 3/5. (§6c)

Questions for you (round 2)

1. **CH4:** are the **minutes** laid out the way you want (overview, agenda, discussion, decisions, action items with owner and due date)?
2. **CH4:** by default only the **people on the call** can read the minutes. Is that the right default?
3. **CH5:** channel settings and join requests are decided by the **PM or the project's division leaders**. Should anyone else decide?

---

0. What's new since your feedback (round 1)

Each row is one point from your feedback. "How to check" gives the quickest way to see it; the section in brackets has the full steps. If you saw the earlier preview, the demo data has been reset to the new version automatically.

Workspace & general

#	You asked	What changed	How to check
W3	The PM could not approve a task	Only the person a task is assigned to can press **Submit for approval**. The PM and leaders see a note instead, so the PM's final approval always works.	Viewing as **Agus P.**, open **T-101** (Aurora Gala): the drawer says *"Only the assignee can submit this task for approval."* Switch to **Rina M.**: she has **Submit for approval**. (§3.4)
W1	A Division Leader could only assign themselves	A leader can assign **anyone in their division**. People not yet on the project are marked *"will be added to the project"*, and assigning adds them.	Viewing as **Dinda A.**, open **Wibowo–Sari Wedding** → **New task** → *Assign to*: Rina M. and Nadia R. appear with *"· will be added to the project"*. (§3.5)
W2	Attach files to tasks	Task drawer → **Attachments**: PDF, JPG, PNG or Word (.docx), **up to 10 MB each**, up to 10 per task.	Open **T-101**: it already has *run-of-show-v3-draft.docx*. Drop a PDF or photo on it. (§3.8)
—	The "Demo mode" tag covered content	The floating tag is gone. The top bar shows a **DEMO MODE** chip instead (on a computer).	Look at the top bar after signing in. (§1)

Events, RSVP & check-in

#	You asked	What changed	How to check
E1	"New event" could not add a new client	The *Client* list ends with **+ New client**, which opens a small form and selects the new client.	Events & Invitations → **New event** → *Client* → **+ New client**. (§5)

#	You asked	What changed	How to check
R1	Several checkpoints (Main Entrance, VIP, Goodie Bag), logging place and time	Each device picks where it is **Scanning at**. Every scan is logged with checkpoint and time. Staff are warned about a repeat scan, or a guest outside a checkpoint's categories, and can still let them in.	Aurora Gala → **Check-in** → *Scanning at* **VIP Lounge** → search **Fitri** → a warning says the lounge is for VIP guests. Meridian's **Scan log** shows 37 seeded scans. (§5.6)
R2	Guest categories (VIP / Media / Regular / Vendor)	A **Category** column, filter pills with counts, search, and a `category` column in CSV import and export.	Aurora Gala → **Guests & RSVP**: pills *VIP · 6, Media · 3, Regular · 21, Vendor · 1*. (§5.4)
R3	Reopening the RSVP link should show the QR again	The phone remembers who replied, and every guest also has a **personal link** that shows their reply and QR on any device.	Guests & RSVP → link icon at the end of a row (**Copy personal link**) → open it in a new tab. (§5.3)
R4	Thank-you / feedback message after the event (D+1)	Reminders can run **after the event** (D+n) to *Guests who came* or *RSVP'd but did not come*. `{feedback}` inserts your feedback-form link.	Aurora Gala → **Reminders**: the D+1 thank-you rule. (§5.5)
R5	Internal notes on guests who RSVP'd but did not come	An **Internal note** column in the attendance report, saved with who and when. Guests never see it.	Meridian → **Attendance report** → *RSVP'd, did not come*: Elsa Nugroho and Fajar Setiawan already have notes. (§5.7)
R6	More than 10 people per invitation	Up to **50** per invitation. Above 10 the guest gets a − / + counter instead of a list.	Aurora Gala → Invitation → RSVP form → *Up to __ people per invitation* = 20, then open as guest. (§5.1)
R7	Your own RSVP questions (text, multiple choice, dropdown)	Invitation → RSVP form → **Your questions**: up to 10 per event, required or optional, for everyone or only guests who accept. Answers appear in the guest list, at check-in and in the export.	Aurora Gala has three: *Meal preference*, *shuttle*, *song request*. Guests & RSVP → **Answers from guests attending** shows the tallies. (§5.1, §5.4)

CRM, chat & vendors

#	You asked	What changed	How to check
C1	Tick boxes and Select all; send a campaign only to ticked contacts	A tick box on every contact, and one in the header for everything shown. A campaign goes to the ticked contacts **who gave marketing consent**; the others are skipped and named in a warning.	CRM → **Guest contacts** → tick a few → **Compose campaign**. (§6.2)
C2	A Google Calendar section	Relationship calendar → **Month**: a month grid of nudges, birthdays, anniversaries and events. **Connect Google Calendar** (simulated) adds the team's Google events in blue.	CRM → Relationship calendar → **Month** → **Connect Google Calendar**. (§6.3)
CH1	Replies in the main chat, quoting the original	**Reply** posts in the main chat with a quote (click it to jump to the original). **Reply in thread** still opens the side panel.	Aurora Gala → **#field**: Rina's reply quoting Dinda. (§4.4)
CH2	Group and one-to-one calls, screen sharing	**Voice and video calls** from any channel or direct message, with mute, camera and **screen share** (simulated). **Direct messages** added: only the two people can read them.	Aurora Gala → #general → video icon. (§4.5)

#	You asked	What changed	How to check
V1	PO pipeline: PO Issued → DP Paid → In Progress → Delivered → Fully Paid	Purchase Orders → **Pipeline**: five columns with counts and totals, and a **delivery status** on each order. Payment statuses are unchanged.	Purchase Orders → **Pipeline**. (§6b)

Coming next

#	You asked	Status
J1	Review and edit the journal (and tax) before posting a down payment or vendor payment	**In progress.** The confirmation pop-up exists but shows no lines in this demo. Next: the real lines in the demo, and editing the tax, bank account, notes and extra lines (e.g. bank charges) before posting.
J2	Two dates: receipt date and date received; reports use the date received	**Rule confirmed:** every report already uses the date the money was received/recorded. Invoices and vendor invoices already keep both dates. Next: both dates on the *down payment received* and *vendor payment* pop-ups.
CH4	Real AI for meeting minutes	**Ready, switched off in the demo.** The minutes come from DeepSeek once its key is set in Oscenia's Vercel account (OpenAI can be used instead). Until then the demo shows a simulated summary, labelled as such.

Questions for you

We built a sensible default for each of these. Please confirm or tell us what you'd prefer:

1. **C1:** a ticked contact who did **not** give marketing consent is skipped, with a warning. Should staff be able to send to them anyway? (We recommend not.)
2. **C2:** what should the Google Calendar section do for you: show the team's Google events beside CRM dates, add CRM dates to Google, or something else?
3. **CH2:** we added one-to-one **direct messages** with the calls. Do you want them? (Not even the PM can read a DM.)
4. **R6:** is **50 people** per invitation enough?
5. **W2:** is **10 MB per file** the right limit?

---

1. Getting in

1. **Open the link** Oscenia shared with you (a Vercel "Share" link). Always open that link first. It unlocks the preview for your browser.
2. Go to the `/erp/` page of that site, if it didn't open there directly.
3. On the sign-in screen, click **CEO** in the **Demo accounts** list. This fills in the email and password for you. Then press **Sign in**. - Demo password for every account: `oscenia-demo-2026`. - Use the CEO account for this guide, because it sees every module.
4. On a computer, a **DEMO MODE** chip in the top bar confirms you are in the prototype (no server connected; changes stay in this browser).

The four new modules are in the left sidebar:

Sidebar item	What it is
Workspace & Tasks	Projects, tasks, approvals, who is blocked and why
Team Chat	Discord-style chat per project
Events & Invitations	Invitation websites, RSVP, reminders, QR check-in, attendance report
CRM & Clients	Existing client list, plus guest contacts and the relationship calendar

> **The demo has a fixed "today": 26 July 2026.** All deadlines, "overdue" labels and "in 3 days" counts are measured from that date.

---

2. "Viewing as" — seeing each role's access

The Workspace and Chat screens have a gold **Viewing as** box at the top. It lets you see exactly what each person on the team would see, without signing in as them.

Person	Role	What they can do
Agus P.	Project Manager	Sees everything; assigns anyone; gives the **final** approval
Dinda A.	Field Division Leader	Sees projects the Field division is on; assigns within Field; gives the **first** approval
Maya S.	Design Division Leader	Same, for the Design division
Hendra T.	Production Division Leader	Same, for the Production division
Rina M., Putri L., Yoga K., Sela D.	Staff	See their projects and all tasks there; can assign to peers and interns on their projects
Kevin W., Nadia R.	Intern	See **only their own tasks**, on their projects (Kevin is on two); cannot assign or approve

The persona is **per browser tab**. You can open two tabs side by side, each viewing as a different person.

---

3. Workspace & Tasks

Open **Workspace & Tasks** in the sidebar.

3.1 All projects at a glance

1. The **Projects** tab shows one card per project, with: - the **PIC**, the divisions on the project and the event date; - counts for **Open**, **Approval** (waiting for sign-off), **Blocked** and **Overdue**; - a progress bar and the next deadline.
2. Click a card to open that project's task board.

3.2 Where work is blocked, and why

1. Open the **Blocked & overdue** tab.
2. Each blocked task shows its recorded **reason** and who holds it. For example: - **T-102**: waiting on the client's logo files. - **T-203**: permit waiting on a family consent letter. - **T-309**: venue hasn't sent the ceiling drawings.
3. Overdue tasks are marked **Overdue**, with how many days late.

3.3 Switch roles and watch access change

1. In **Viewing as**, pick **Dinda A. — Field Division Leader**. Only the projects Field works on remain, and the counts change.
2. Pick **Kevin W. — Design Intern**. The note at the top explains what an intern sees. Open a project: only Kevin's own tasks appear, and there is **no "New task" button**.
3. Pick **Agus P. — Project Manager** again. A fourth tab, **Team & access**, appears (PM only).

3.4 One task from assigned to approved (the two-stage approval)

1. **Viewing as: Kevin W. (Intern).** Go to **My tasks** and open **T-205 · Table-setting mockups**. The task drawer slides in.
2. Click **Start**, then **Submit for approval**.
3. **Viewing as: Maya S. (Design Leader).** In **My tasks** → **Waiting for my approval**, open T-205 and click **Approve (stage 1)**.
4. **Viewing as: Agus P. (PM).** Open T-205 again and click **Final approve (stage 2)**. The task is now **PM approved**.
5. Scroll down the drawer to the **Activity** trail. It shows who assigned the task, who started and submitted it, and who approved it at each stage, with times.

Also try: - **Only the assignee submits.** Viewing as **Agus P.** or **Dinda A.**, open **T-101** (assigned to Rina): instead of *Submit for approval* the drawer says *"Only the assignee can submit this task for approval."* They can still mark it blocked or copy its link. - **Mark blocked** asks for a reason. The reason then appears on the Blocked board. - **Reject** asks for a comment and sends the task back to *In progress*. - **Nobody approves their own work.** T-203 belongs to Dinda, who leads its division, so it goes straight to the PM. - **Copy task link** copies a link that opens this exact task. The Team Chat section uses it.

3.5 Who may assign what

1. **Viewing as: Putri L. (Design Staff).** Open **Wibowo–Sari Wedding**, click **New task**. The *Assign to* list shows only staff and interns on that project.
2. **Viewing as: Dinda A. (Field Leader).** On the same project, the list shows **everyone in the Field division**: Dinda herself, plus *Rina M. — Field Staff · will be added to the project* and *Nadia R. — Field Intern · will be added to the project*. Assign a task to Rina (**Assign task**): she is added to the project and can now see it.
3. **Viewing as: an intern.** There is no New task button.

3.6 Access is enforced, not just hidden

1. **Viewing as: Nadia R. (Field Intern).**
2. Open this address in the same tab: `/erp/workspace/EVT-2026-CONF-03?task=T-301`

3. You get **"No access to this task"**. Nadia is not on that project, and the task isn't hers.

3.7 Team & access (PM only)

1. **Viewing as: Agus P.** → **Team & access** tab.
2. Tick which **divisions** work on each project, and which **staff and interns** are on each project.
3. Tick an intern onto a new project, switch to that intern, and the project appears for them.

3.8 Attach files to a task

1. Open **T-101 · Finalise run-of-show v3** (Aurora Gala). The drawer has an **Attachments** section, already holding *run-of-show-v3-draft.docx* from Rina.
2. Drop a file on **Drop files here or click to attach**, or click it to pick one. Allowed: **PDF, JPG, PNG or Word (.docx), up to 10 MB each**, up to 10 files per task.
3. Try a file of another type, or one over 10 MB: it is refused with the reason. A program renamed to `.pdf` is refused too.
4. The upload is logged in the task's **Activity**, and the task row shows a paperclip icon with the count.
5. Anyone who can see the task can attach until it is done. The uploader or the PM can remove a file.

In the prototype, photos keep a small preview, and PDF/Word files under 250 KB can be opened. Larger files keep only their name and size. With the backend every file is stored in full.

---

4. Team Chat

Open **Team Chat** in the sidebar.

4.1 Layout (like Discord)

- **Far left: the servers. Oscenia** holds company-wide channels and your direct messages. After a divider, there is one server per project; hover an icon to see its name, e.g. *Aurora Bank Annual Gala*.
- The server you are in has a tall white **pill** and is gold.
- A short pill means unread messages.
- A red number counts @mentions and unread direct messages.
- **Next column: the server's channels.**
- Click the **server name** ▾ for *Task board*, *Invite people* (copies the link) and *Mark as read*. Managers also get *Create channel* and *Channel settings* (§4.6).
- Channels sit in foldable categories: **Text channels** (`#general` plus one per division), **Voice channels** (*Meeting room*; *Lounge* in Oscenia) and, in Oscenia, **Direct messages**. Click a category name to fold it. Your browser remembers which ones are folded.
- **Bottom left: you.**
- Click your name to set your **status**: Online, Idle, Do not disturb or Invisible.
- The 🎙 and 🎧 buttons mute and deafen you in a call.
- **Middle: the messages.** Messages from the same person within a few minutes are grouped under one name. Hover a grouped line to see its time.
- **Right: who is in the channel**, split into **Online** and **Offline**. Other people's status is simulated in the demo.
- **On a phone**, ☰ in the header opens the servers and channels as a slide-in drawer.

4.2 Who sees which channels

1. **Viewing as: Agus P. (PM).** You see every server, including the private 🔒 **#leaders** channel.
2. **Viewing as: Nadia R. (Field Intern).** Only **Oscenia** and **Aurora Bank Annual Gala** remain, and #leaders is gone. Aurora's **#production** shows greyed with a 🔒: it is for the Production division, and Nadia can ask to join (§4.6).

4.3 Mentions and task links

1. Stay as **Nadia R.** and open **Aurora Bank Annual Gala** → **#general**.
2. In the message box, type `@Ri` and pick **Rina M.** from the list. Then type `#T-10` and pick **T-106** from the task list.
3. Press **Enter**. The message shows **@Rina M.** as a highlighted chip, with a **task card** below it (title, status, PIC, deadline).
4. Click the task card. The same task drawer as in the Workspace opens.
5. **Viewing as: Rina M.** The channel now shows a red **@1** mention badge, and the message is highlighted for her.

Pasting a copied task link into the box also turns it into a task card.

4.4 Replies, threads, reactions, edits

1. **Quoted reply in the main chat. Viewing as: Rina M.**, open **Aurora Bank Annual Gala** → **#field**. Rina's message of 24 Jul shows a quote of Dinda's catering note. Click the quote to jump to the original. - To make one: hover a message → **Reply**. The box shows *"Replying to …"* (× or Escape cancels). Your message is posted at the bottom of the chat, with the quote.
2. **Thread. Viewing as: Maya S.** Open **TechNusa Developer Conference** → **#design**. Kevin's message about the deadline shows **1 reply**. Click it to open the thread panel, and reply there.
3. Hover any message to see its toolbar: - **React** (emoji); - **Reply** (quoted, in the main chat); - **Reply in thread** (side panel); - **Create task from message**, which pre-fills a new task and posts a link back to it; - **Edit / Delete**.
4. **Edit and delete rules:** - Authors can edit or delete their own message for **15 minutes**. - The **PM can delete any message**. - A deleted message leaves a "message deleted" placeholder.

Try two tabs side by side: view as two different people and chat between them.

4.5 Direct messages and calls

1. **Direct messages.** In the **Oscenia** server, under **Direct messages**, click **+** (*New message*) and find a teammate. Or click the message icon next to a person in the member list. - The header says *"Direct message — only the two of you can see it"*. - Seeded: **Agus P.** ↔ **Rina M.** and **Dinda A.** ↔ **Rina M.** - Privacy: **Viewing as Hendra T.**, open `/erp/chat/dm-M-01-M-05` (Agus ↔ Rina). It says *"You can't see this conversation"*. Not even the PM can open someone else's DM.
2. **Calls (simulated). Viewing as: Agus P.**, open **Aurora Bank Annual Gala** → **#general** and click the **video** (or **phone**) icon in the header. - Teammates join automatically. Try **Mute**, **Turn camera off**, **Share screen** (the tile shows *"Agus P. is presenting"*) and **Leave**. - In a second tab, **viewing as Yoga K.** in the same channel, a banner shows *"Video call in progress · … in the call"* with **Join**. The

channel list shows a green phone icon. - When the call ends, the channel logs it, e.g. *"Video call · 18 min · Dinda A., Rina M., Hendra T."* (a seeded one is in #general on 24 Jul). - A call from a DM is one-to-one; from a channel it is a group call.

3. **Voice channels.** Click **Meeting room** under *Voice channels* (or **Lounge** in Oscenia) to start a call there, or to join the one already running. - The people on the call are listed under the channel. - The call is logged in the project's **#general**. Lounge calls are logged in the company **#general**. - **Back to chat** (top right of the call) keeps the call running while you read. The panel bottom-left then shows *Voice connected* with ↗ (back to the call) and a hang-up button. On a phone, a green bar at the top does the same. - Only one call runs at a time. While one is going, other voice channels are greyed out.

There is no real audio, video or screen picture in the prototype. That needs a calling service on the backend.

4.6 Who may join a channel (and asking to join)

1. **Locked channels. Viewing as: Rina M.**, open **Aurora Bank Annual Gala**. **#production** is greyed with a 🔒: it is for the Production division. - Click it. You see *"#production is locked"*, and its messages stay hidden. - Her request from 25 Jul is already waiting (*Request sent*).
2. **Ask to join. Viewing as: Nadia R.** Open #production, type why you need it (optional), and press **Request to join**.
3. **Decide. Viewing as: Hendra T.** (Production lead). The 🔔 bell shows *"Rina M. wants to join #production"* and the same for Nadia. - Click it. **Channel settings** opens with both requests: ✓ **Approve** or ✕ **Decline**. - Approved people can open the channel straight away. Each requester gets a notification of the answer. After a decline, they can ask again.
4. **Channel settings** (server ▾ → *Channel settings*, or the ⚙ that appears when you hover a channel). Open to the PM, and on a project to the leaders whose division works on it. Company channels are the PM's. - **Who can join:** *Everyone on the project*, *Selected divisions*, or *Invite only*. - **Also let in / Members:** named people. - **Blocked:** kept out whatever the rule says. The PM can't be blocked, and a blocked person loses any say over the channel. Blocking someone also drops them from a call in that channel. - **Show it locked…:** untick to hide the channel completely from people who can't open it, like #leaders.
5. **Create a channel. Viewing as: Dinda A.**, in Aurora Gala, open server ▾ → **Create channel**. Choose *Text* or *Voice*, name it (e.g. *venue walk* becomes **#venue-walk**), pick who can join, and press **Create channel**.
6. **Try it: Viewing as Hendra T.**, block **Yoga K.** from #general. Then **viewing as Yoga K.**, #general is gone from his list.

4.7 Meeting records and minutes (MOM)

Every call that ends becomes a **meeting record**.

1. **Restricted minutes. Viewing as: Yoga K.** Open **Aurora Gala** → **#general**. The 24 Jul video call shows 🔒 *"Minutes restricted"*: Yoga was not on the call.
2. **Reading the minutes. Viewing as: Dinda A.** (she hosted it). Click **Minutes** on the same line. A panel opens with four tabs: - **Summary & MOM:** attendees, date and length, overview, agenda, discussion, decisions, and action items with owner and due date. Use **Copy MOM**, **Download MOM (.md)** and

Create tasks from action items. Tasks follow the usual assignment rules and are never created twice. - **Transcript:** what was said. Simulated, like the call. - **Files:** files shared during the call. - **Access** (host and PM only):
   - **Who can read** the minutes: *people on the call*, *everyone in the channel*, or *people on the call plus named people*.
   - **Files view-only:** others see the file names but can't open them.
   - Set it to *Everyone in the channel* and save. **Viewing as Yoga K.**, the line now shows **Minutes**.
3. **Notes and files during a call.** In any call, press 📝 **Notes & files**. Type notes and drop in files. Both are saved with the meeting.
4. **Generate the minutes. Viewing as: Maya S.** Open **TechNusa Developer Conference** → **#design**, click **Meeting record** on the 25 Jul call, then **Generate AI summary & MOM**. - After a moment the minutes appear, labelled *"Demo AI summary — simulated, no AI service connected"*. - Switch the app to **Bahasa Indonesia** first to get them in Bahasa.
5. **Post summary to channel** is offered only when the minutes are open to the whole channel, so posting can't show them to anyone the host kept out.
6. **Privacy rules:** - The PM reads the minutes of every channel call, but **never** those of a call in a direct message. - Someone who can't open the channel never sees the minutes, whatever the access setting.

4b. Notifications (the bell)

The 🔔 **bell** in the top bar shows what needs the current person's attention. The red number is how many are unread.

1. **Viewing as: Agus P. (PM)** in Workspace or Chat, then click the bell. **Needs your approval** items are pinned at the top: tasks waiting for the PM's final sign-off.
2. Below them, newest first: - **Assigned to you:** a task someone handed to this person, still open. - **Mentioned you:** an @mention in a channel this person can open. - **Blocked:** a task this person handed out has been blocked, with the reason (the PM hears about every blocked task). - **Sent back** and **Approved:** their own task was rejected (with the comment) or given final approval. - **New RSVP / RSVP declined:** the latest replies for upcoming events, for logins that run events. - **Time to reach out / Birthday / Company anniversary:** CRM items due within a week, overdue nudges included.
3. **Click any item** to open the exact task, chat channel, event guest list or client page, and mark it read. **Mark all read** clears the badge.
4. **Try it end to end:** - As **Nadia R.**, post `@Rina M.` in *Aurora Bank Annual Gala* → *#general*. - Switch to **Rina M.**: the bell count goes up and shows *Mentioned you*. - As **Maya S.**, approve a Design task: it leaves Maya's bell and appears in the PM's as *Needs your approval*.
5. **Privacy:** a mention in a channel someone can't open (e.g. private #leaders) never reaches their bell.

Notifications follow the **Viewing as** person, so switch persona to see someone else's. They are in-app only in the prototype; push, WhatsApp or email alerts come with the backend.

---

5. Events & Invitations

Open **Events & Invitations** in the sidebar. There are two events:

- **Aurora Bank Annual Gala 2026:** upcoming (14 Aug), RSVPs open.
- **Meridian Rose Collection Launch:** already held (30 Jun). Use it to see a finished event.

Click **New event** to create your own (it starts as a draft).

- **A client who isn't in the list yet:** open the **Client** dropdown and pick **+ New client** (the last option). Fill in **New client name** (contact person and phone are optional) and press **Add client**. The new client is selected, and it also appears in the CRM client list. Then press **Create & design**.

5.1 Design the invitation

1. Open **Aurora Bank Annual Gala 2026** → **Invitation** tab.
2. The left panel edits everything, and the right side is a **live preview**. Use the 📱 / 📲 buttons to switch between desktop and phone. - **Colours:** 4 palettes, plus a custom accent colour. - **Fonts:** Classic, Modern, Romantic. - **Photo:** preset backgrounds, or **Upload photo**. - **Words:** title, subtitle, message, dress code, map link, and the programme (add or remove rows). - **Event details:** name, date, time, venue, RSVP closing date. - **Event details:** also a **Feedback form link (for follow-ups)**, used by the thank-you message after the event (§5.5). - **RSVP form:** choose whether to ask email, allergies and number of people, and the maximum party size (**up to 50 people per invitation**). Name and phone are always asked, and a marketing-consent box always appears, unticked.
   - Above 10, the guest gets a **– / +** counter instead of a dropdown. Try it: set *Up to __ people per invitation* to **20**, then open the invitation as a guest.
   - **Your questions** (in the RSVP form section): add your own questions, up to 10 per event.
   - Types: **Short text**, **Multiple choice** (optionally *Allow several answers*) or **Dropdown** (one option per line).
   - Each can be **Required**, and asked of everyone or **Only guests who accept**.
   - The Gala already has three: *Meal preference* (dropdown: Beef / Fish / Vegetarian, required), *Will you take the shuttle from Senayan?* (Yes / No) and *A song you would love to hear* (text).
   - Removing a question hides it from guests but keeps the answers already given.

5.2 Share it

The buttons at the top of the event page: - **Publish / Unpublish:** guests can only open a published invitation. - **Guest link:** copies the public invitation link for the guest list. - **Client edit link:** copies a private link the **event client** uses to edit the invitation **without logging in**. The client can change the look and the words. Date, venue and RSVP questions stay with Oscenia. - To try it: `/erp/invite/EV-01/edit?key=aurora-7f2k` - **Open as guest:** opens the public invitation.

5.3 RSVP as a guest

1. Click **Open as guest** (a new tab opens, with no sign-in needed).
2. Scroll to **RSVP** and fill in name and phone. Choose **Joyfully accept**, pick the number of people, add an allergy, and optionally tick the **marketing consent** box. Answer the Gala's own questions too. A required one left blank shows *"Please answer: ..."*.
3. Press **Send RSVP**. You get a **personal QR code** for the registration desk.
4. **Change my reply** lets a guest update their answer until the RSVP closes.
5. **Coming back later.** Close the tab and open the invitation again on the same device: it goes **straight to your confirmation and QR**. *"Not [name]? Reply for someone else"* lets another person use the same phone.

6. **Personal link.** The confirmation also shows *"Your personal link"* with **Copy**. It opens that guest's reply and QR on **any** phone. Staff can copy each guest's link from the guest list (§5.4), and the `{link}` in reminders is now each guest's own link. - Example (Dewi Wijaya, VIP, attending): `/erp/invite/EV-01?g=7wdrqp` - Example (Bella Rahman, not replied yet; the form opens already filled in): `/erp/invite/EV-01?g=1osq1z`

> The Meridian invitation (`/erp/invite/EV-02`) shows how a **closed RSVP** looks after an event.

5.4 Guests & RSVP (staff view)

1. Go back to the first tab and open the **Guests & RSVP** tab. **Your RSVP is already there.** It is marked *Not on the client's list*, because you are not on the Aurora list.
2. The counts at the top: invited, attending, declined, no response, total people, guests with allergies.
3. **Filters:** Attending / Declined / No response / Not on the list, plus a search box.
4. **Table:** assign a table per guest from the dropdown.
5. **Category:** each guest is **VIP**, **Media**, **Regular** or **Vendor**. Change it in the row. The **Category** pills filter the list, with counts (Gala: *VIP · 6, Media · 3, Regular · 21, Vendor · 1*), and the search box matches categories too. The category also shows at check-in and in the report.
6. **Answers to your questions:** the box **Answers from guests attending** tallies them for catering (Gala: Beef 7, Fish 8, Vegetarian 4; shuttle Yes 7, No 12), and each question has its own column.
7. **Personal link:** the link icon at the end of each row (**Copy personal link**) copies that guest's own invitation link (§5.3).
8. **Add guest**, **Import CSV** (see sample below) and **Export**. The export includes category, answers, personal link and internal notes.

Sample CSV (header row optional; commas or semicolons both work):

```
name,phone,email,table,category
Budi Santoso,0812 1111 2222,budi@example.com,T1,VIP
Sari Dewi,0813 3333 4444,,T2,Media
```

Phones already on the list are skipped, so importing the same file twice adds nobody.

5.5 Reminders

1. Open the **Reminders** tab. Aurora has three rules before the event: - **D-10:** guests who haven't replied; - **D-7:** attending guests, by WhatsApp; - **D-3:** attending guests, by WhatsApp and email.
2. ...and one **after** the event: **D+1**, a thank-you to **Guests who came**, with the feedback-form link (*"Thank you for joining us at {event}, {name}! We would love to hear how it went: {feedback}"*). It is switched off until you tick **Active**.
3. For each rule you can change: - **Before the event** or **After the event**, and how many days (D-n / D+n); - the audience: before the event *Guests attending* | *Guests who have not replied*; after it *Guests who came* | *RSVP'd but did not come*; - the channel (WhatsApp / Email / both); - the message, using the placeholders `{name} {event} {date} {venue} {link} {feedback}`. A **live preview** shows the result.
   - `{link}` is each guest's personal link. `{feedback}` is the **Feedback form link** from Invitation → Event details. A warning appears if that link is missing.

4. **Send now** records a simulated send in the **Send log**, with the number of recipients. A follow-up cannot be sent before the event (it shows *"Sends after the event"*).
5. **Add reminder** creates a new rule; **Add follow-up (after the event)** creates a D+n one.
6. On **Meridian** (already held), the D+1 thank-you has run: the Send log shows *"D+1 follow-up · 21 · came"*.

5.6 Check-in on the day

1. Open the **Check-in** tab. The desk opens for the demo even though the event is on 14 Aug.
2. **Choose the checkpoint.** In the bar at the top, **Scanning at** sets where this device is. Aurora has **Main Entrance**, **VIP Lounge** (VIP only) and **Goodie Bag**. Each device remembers its own choice, so the lounge tablet stays on the lounge. - **Checkpoints** (button on the same bar) lets you rename, add or remove them, and tick categories to restrict one (none ticked = everyone).
3. Click **Scan QR**. The camera is simulated: tap one of the guests' QR codes. Or search by **name or phone** in the box next to the button.
4. The guest card shows **Category**, **Table**, **People**, **Allergies** and their answers (e.g. *Meal preference: Beef*). The table can be changed here. Click **Check in at [checkpoint]**.
5. **Warnings (staff can still let the guest in):** - At **VIP Lounge**, search **Fitri** (a Regular guest): *"VIP Lounge is for VIP guests. This guest is Regular."* The button becomes **Let in anyway · VIP Lounge**. - Check **Dewi Wijaya** in at Main Entrance, then find her again: *"Already scanned here at [time]."* The button becomes **Log again at Main Entrance**. - The same guest can be scanned at each checkpoint (entrance, then goodie bag), and each scan is logged.
6. **Scan log:** every scan with time, checkpoint and guest, filter pills per checkpoint, and **Export** (CSV). Meridian already has 37 scans: *Main Entrance · 21, Goodie Bag · 16*.
7. **Walk-ins:** the right panel shows the **Walk-in QR** for the desk. Click **Open the walk-in form** (or go to `/erp/walkin/EV-01`) and register a new person. - They are checked in as a **Walk-in** and added to the CRM if they tick consent. - Someone already on the list is simply checked in, not duplicated.
8. The counters show **Arrived**, **Expected (RSVP yes)**, **People arrived**, **Walk-ins** and **Scanned at [checkpoint]**. **Recent arrivals** lists the latest.

5.7 Attendance report

1. Open **Meridian Rose Collection Launch** → **Attendance report**.
2. The four boxes:

	Came	Did not come
RSVP'd yes	16	4
No RSVP / declined	5 (incl. 3 walk-ins)	6

3. Click any box to list the people in it, and use **Export all** to download a CSV (with category, checkpoints visited and internal notes).
4. **Internal notes:** in **RSVP'd, did not come**, each guest has an **Internal note** field. Type a reason or follow-up and click away to save it; it shows who wrote it and when. - Already noted: **Elsa Nugroho** (flight delayed, send the launch kit by courier) and **Fajar Setiawan** (sick on the day, offer a private preview). - Notes also show under the guest's name in Guests & RSVP. Guests never see them.
5. The Aurora report explains that it fills in on event day.

---

6. CRM & Clients

Open **CRM & Clients** in the sidebar. It now has three tabs.

6.1 Clients (existing) + "Coming up"

The top card lists the next three things to act on, overdue first. For example: - TechNusa's *Product Launch* nudge (overdue); - **Ibu Ratna**'s birthday in 2 days; - **Bpk. Wibowo**'s birthday.

Full calendar → opens the calendar tab.

6.2 Guest contacts — one list from every event

1. Open the **Guest contacts** tab. The **62 guest records** from both events become **40 contacts**, because people who came to both events are merged by phone number. (Any RSVP or walk-in you added in section 5 adds one more.)
2. Each contact shows which events they came to (✓ = attended) and their **marketing consent**, with the date and which event it came from.
3. Filters: **Consented only**, **Attended**, and a choice of event.
4. **Choose who gets a campaign.** Tick the box on each contact, or the box in the header to tick everything the current filters show. - The bar above the list shows *"[n] selected"*, and *"[n] without marketing consent — they will be skipped"*. **Clear** unticks all.
5. **Compose campaign · [n]** sends only to the **ticked contacts who gave consent**. The pop-up names anyone skipped for lack of consent. Sending is simulated.
6. **Campaigns (simulated)** records each send: recipients, and how many were skipped.

6.3 Relationship calendar — when to get in touch

1. Open the **Relationship calendar** tab and choose **Next 30 / 60 / 90 days**.
2. **Event nudge:** Oscenia learns when each company usually holds an event and reminds staff ahead of it. For example: - Aurora Bank holds a *Year-end Town Hall* every **November**, so the nudge is **1 Aug**, 3 months ahead. - TechNusa's *Product Launch* nudge is already **overdue**.
3. **Birthdays** of the people we work with, and **company anniversaries**.
4. Buttons: - **Log outreach** marks the nudge as done and adds a *Call* entry to the client's history. - **Send greeting** is a simulated WhatsApp/email greeting, once per person per occasion per year.
5. **Month view and Google Calendar (simulated).** Switch from **List** to **Month**. July 2026 shows event nudges, birthdays, company anniversaries and events in colour; click a day to see what's on it. - In the **Google Calendar** card, click **Connect Google Calendar**. A stand-in for Google's sign-in asks for a Google account (any email address works), then **Allow**. - The team's Google events now show **in blue** beside the CRM dates, e.g. *Lunch with Ibu Ratna (Aurora Bank)* on 28 Jul and *Site visit — Ritz-Carlton ballroom* on 30 Jul. - Options: **Show my Google events here**, and **Add CRM dates to my Google Calendar**. **Disconnect** removes the link.

6.4 Client 360 — the relationship view of one client

1. In the **Clients** tab, click **Aurora Bank**. Three new cards appear under the numbers: - **People we work with:** Ibu Ratna and Pak Surya, with roles, contacts and birthdays. Click **+** to add a person (birthday as `MM-DD`, e.g. `09-01`), and choose whether they get an automatic birthday greeting and by which channel. - **Event cycle:** *Annual Gala* (usually August) and *Year-end Town Hall* (usually November),

each with the next nudge date. Change "Nudge __ months before" to move it. After **Log outreach** it shows **Contacted**, with the note. - **Greetings:** the company anniversary (1 Mar 2019), whether it is sent automatically and by which channel, a message preview, and the log of greetings sent.
2. The existing **Interaction History** further down also shows the logged outreach.

6b. Purchase Orders — the pipeline board

Open **Purchase Orders** in the sidebar, and switch from **Table** to **Pipeline**.

1. **Five columns**, each with a count and total: **PO Issued** → **DP Paid** → **In Progress** → **Delivered / Completed** → **Fully Paid**.
2. Where the demo orders sit:

PO	Vendor	Column
PO-3004	Bloom & Co (Wedding)	PO Issued
PO-3003	SoundForge (Conference)	In Progress (delivery in progress)
PO-3001, PO-3002	Lumina LED, StageWorks (Gala)	Fully Paid

3. **Delivery status** is separate from the payment status. Change it with the **Delivery** dropdown on a card: *Not started*, *In progress* or *Delivered*. The card shows who changed it and when, and the order moves along the board.
4. **Payment buttons** on the cards (pay DP, settle) are the same actions as in the table, and post to the ledger as before. A fully paid order sits in **Fully Paid** whatever its delivery status.
5. Draft and cancelled orders are under **Drafts & cancelled** below the board (e.g. PO-3005, a draft you can **Approve**).

In the prototype the delivery status is kept in your browser; with the backend it becomes part of the purchase order.

6c. Vendors — the lifecycle board

Open **Vendors** in the sidebar, and switch from **Table** to **Pipeline**.

1. **Four stages**, with counts: **Prospect** → **Onboarding** → **Approved** → **Active**. Vendors *On hold* or *Blacklisted* are listed below the board.
2. **Onboarding checklist** (shown on the card as e.g. *3/5*): - Read from the vendor record: NPWP, bank account and holder, PIC with phone or email. - Ticked by hand: signed MoU (or an attached agreement), and the reference check.
3. **Moving a vendor on:** - **Start onboarding:** anyone who can see Vendors. - **Approve:** needs the checklist complete, and a finance or CEO login. A PM may tick items but not approve. - **Active:** comes with the vendor's first live purchase order. - **Put on hold** and **Blacklist** (··· menu) need a reason. On hold returns the vendor to where it was. A blacklisted vendor goes back to Onboarding when reactivated.
4. **Only Approved or Active vendors** can be picked for a new purchase order, or have a draft PO approved.

5. In the demo, **BrightRig** is in Onboarding at 3/5. A new vendor starts as **Prospect** and is kept after a refresh. **Vendor 360** (click a vendor) shows its stage, checklist and history.

---

7. Other things to try

- **Language:** use the language toggle in the top bar to switch the ERP to **Bahasa Indonesia**.
- **Deep links:** any event tab can be opened directly, e.g. `/erp/events/EV-01?tab=checkin`. Same for the CRM, e.g. `/erp/crm?tab=calendar`.
- **On a phone:** every screen works at phone width (checked at 390 px, iPhone size).
- The menu opens from ☰. In Chat, ☰ in the chat header opens the servers and channels as a drawer, and the meeting panel fills the screen.
- The guest pages (invitation, RSVP, walk-in) are designed for phones first.
- **Start over:** in **Workspace & Tasks**, the ↺ button next to *Viewing as* restores all demo data (workspace, chat and meetings, events, CRM, purchase-order delivery, vendor stages, and added clients and vendors) in every open tab.

---

8. Good to know

Topic	In the prototype	With the backend (after sign-off)
Where data lives	In **your browser only**. Your changes are not visible on anyone else's device, and a guest replying from their own phone won't appear on yours.	A shared database; everyone sees the same data live.
Two tabs	Changes in one tab (e.g. an RSVP) appear in the other tab of the same browser.	Works across devices.
WhatsApp / email	Simulated: logged, not sent.	Sent through Oscenia's WhatsApp Business account and email.
QR scanning	Tap a code in the simulated scanner.	Real phone or tablet camera at the desk.
Chat	Local to your browser.	Real-time between users.
Calls and minutes	Calls and their transcripts are simulated. The AI summary is a labelled demo.	Real calls through a calling service. Minutes are written by DeepSeek (or OpenAI) from the real transcript.
Sign-in	Demo accounts, no server.	Real accounts and permissions.
Existing finance screens	Some save actions show "Not connected to the API". That is expected in this demo.	Fully connected.

Trouble signing in? Click the account name under **Demo accounts** instead of typing, because that fills in the right password. A saved browser password can otherwise get in the way.

---

9. Feature checklist (BRD v0.2)

BRD	Feature	Where to see it
§2	All projects: PIC, pending, status, deadline	Workspace → Projects
§2	Where work is blocked and why	Workspace → Blocked & overdue
§2	Who assigned, who received, when, when done	Task drawer → Activity
§2.2	Role-based access (PM / Leader / Staff / Intern)	"Viewing as" · §3.3, §3.6
§2.3	Two-stage approval (Leader → PM), block reasons, reject comments	§3.4
§2.4	PM assigns divisions and members to projects	Workspace → Team & access
§3	Project channels, access by project, mentions, task links, threads	Team Chat · §4
§3	In-app notifications: approvals, assignments, mentions, blockers, RSVPs, CRM reminders	🔔 bell · §4b
§4.1	Invitation builder (colours, fonts, photo, copy); client edit link without login	Event → Invitation · §5.1–5.2
§4.2	Public RSVP (name, phone, email, allergies, pax, consent) + personal QR	Open as guest · §5.3
§4.3	Guest list vs RSVPs, table assignment, CSV import	Guests & RSVP · §5.4
§4.3	Configurable WhatsApp/email reminders (D-n)	Reminders · §5.5
§4.4	QR check-in, walk-in self-registration	Check-in · §5.6
§4.5	Attendance reconciliation (4 groups) + export	Attendance report · §5.7
§5.1	Guest contacts from all events, with marketing consent; campaigns to consented only	CRM → Guest contacts · §6.2
§5.2	Client PICs, event history and cycle nudges, birthday/anniversary greetings	CRM → Relationship calendar, Client 360 · §6.3–6.4

Added after feedback round 1 (see section 0):

#	Feature	Where to see it
W1, W3	Leaders assign anyone in their division; only the assignee submits	Workspace · §3.4–3.5
W2	File attachments on tasks	Task drawer → Attachments · §3.8
CH1	Quoted replies in the main chat (threads kept)	Team Chat · §4.4
CH2	Direct messages; group and one-to-one calls, screen share (simulated)	Team Chat · §4.5
E1	New client from the New event pop-up	Events → New event · §5
R6, R7	Up to 50 people per invitation; your own RSVP questions	Invitation → RSVP form · §5.1
R3	Remembered guest and personal guest links	Guest page, Guests & RSVP · §5.3–5.4
R2	Guest categories	Guests & RSVP · §5.4

#	Feature	Where to see it
R4	Follow-ups after the event (D+n), feedback link	Reminders · §5.5
R1	Multiple checkpoints and a scan log	Check-in · §5.6
R5	Internal notes on no-shows	Attendance report · §5.7
C1	Tick contacts for a campaign (consented only)	CRM → Guest contacts · §6.2
C2	Month calendar and Google Calendar (simulated)	CRM → Relationship calendar · §6.3
V1	PO pipeline board with delivery status	Purchase Orders → Pipeline · §6b

Added after feedback round 2 (see section 00):

#	Feature	Where to see it
CH3	Discord-style chat: rail, categories, voice channels, user panel, presence, phone drawer	Team Chat · §4.1, §4.5
CH5	Who may join a channel; block list; join requests decided by the PM or project leaders	Team Chat → Channel settings · §4.6
CH4	Meeting records: transcript, notes, files, Summary & MOM, access decided by the host	Team Chat → a call line → Minutes · §4.7
V2	Vendor lifecycle board with an onboarding checklist	Vendors → Pipeline · §6c
